

Equipment Inspection Checklist

Preventive Maintenance · Checklist Forms

Doc ID	PM-CHK-003
Version	1.4
Effective Date	2026-02-10
Owner	Maintenance Department
Scope	All plants, all machine types

1. Pre-Shift Checklist (Operator)

- Visual check for oil/hydraulic leaks around machine base
- Confirm e-stop and light curtain function
- Check coolant/hydraulic fluid levels are within range
- Verify no open DT-04/DT-05 fault flags from previous shift

2. Weekly Checklist (Maintenance Technician)

- Inspect hydraulic hoses and fittings for wear, bulging, or seepage (Press Line)
- Check spindle/bearing vibration levels against baseline (CNC Milling)
- Verify torque tool calibration sticker validity (Assembly Line)
- Inspect conveyor belt tracking and tension

3. Monthly Checklist (Maintenance Supervisor)

- Full hydraulic oil sample sent for lab analysis
- Review DT-01/DT-08 trend report against PM completion rate
- Audit calibration records for all torque tools and gauges
- Confirm all open CMMS work orders from the past month are closed or escalated

■ Any checklist item marked 'Fail' must generate a CMMS work order the same shift — do not defer major-severity findings.
